

```
This is text is indented by two spaces.  
go on...
```

```
This is preformatted code all spaces are preserved: like      <-this
```

```
This is pretty much the same, but you could use it to show that you quoted a  
file.
```

DokuWiki supports **bold**, *italic*, underlined and monospaced texts. Of course you can **combine** all these.

You can use _{subscript} and ^{superscript}, too.

You can mark something as ~~deleted~~ as well.

This is some text with some linebreaks
Note that the two backslashes are only recognized at the end of a line

or followed by
a whitespace \\this happens without it.

DokuWiki supports multiple ways of creating links. External links are recognized automatically: <http://www.google.com> or simply www.google.com - You can set link text as well: [This Link points to google](#). Email addresses like this one: andi@splitbrain.org are recognized, too.

Internal links are created by using square brackets. You can either just give a [pagename](#) or use an additional [link text](#).

You can use [namespaces](#) by using a colon in the pagename.

This links to [this Section](#).

DokuWiki supports  [Interwiki](#) links. These are quick links to other Wikis. For example this is a link to Wikipedia's page about Wikis:  [Wiki](#).

Windows Shares like [this](#) are recognized, too.

You can add footnotes ¹⁾ by using double parentheses.

Headline Level 1

Headline Level 2

Headline Level 3

Headline Level 4

Headline Level 5

Resize to given width and height:

Resized external image:

[dokuwiki-128.png](#)

- This is a list

- The second item
 - You may have different levels
 - Another item
1. The same list but ordered
 2. Another item
 1. Just use indention for deeper levels
 3. That's it

myexample.php

```
<?php echo "hello world!"; ?>
```

¹⁾

This is a footnote
